

Fall 2016

October Edition

MONTHLY BULL-etin

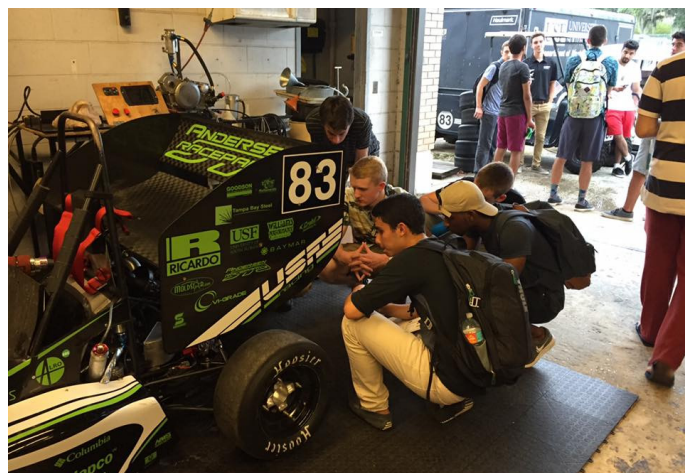

New Member Meeting Success!

Hundreds were expected and hundreds showed! Our team hosted 5 new member meetings this past month. Design leads gave presentations about their systems for new members to find something interesting to work on. Powertrain, Drivetrain, Aerodynamics, Composites, Ergonomics, Suspension, Frame, Data Acquisition, and Electrical systems were presented.

For USF Students:

If you didn't attend the new member meetings, don't worry! There is still a large amount of time ahead of us for design and manufacturing. This means, there is still time to begin working on a project that you can put on your resume!

New Members getting acquainted with our powertrain system

Design Phase in Full Swing

Our team is doing our best to help new members begin projects for the F2017 car. It is a win-win for everyone involved at USF Racing!

For USF Students:

If you want a project, don't quit bugging our design leads! If you're brave, create your own project! Just run it by our president/team captain to see if it aligns with our design goals and determine your project's deadlines.
